Meteorologist's View

Bitterly cold when exposed to the northwest winds.

Forecast for Friday 20 Dec 2024

Weather: A mainly dry start, but an area of rain and summit sleet extends from the west late morning, before clearing eastwards during the afternoon, leaving only a few light isolated showers thereafter.

Maximum wind: West to southwest mean 30-40mph with gust 50mph plus across more exposed ridges and summits.

Chance of cloud-free hill tops above 800m: lowering 20% by late morning, lifting 75% late afternoon

Low cloud and visibility: Good or very good becoming moderate or poor in rain, very poor in snow and within cloud with bases becoming quite extensive from 600m by late morning, before lifting and breaking late afternoon

Temperature: **Valleys:** Plus 2 Celsius increasing 9 Celsius during the afternoon
 At 800m: Plus 2-3 Celsius
 Freezing level: 900-1000m

Ground Conditions Supplement

Date: Wednesday 18 December 2024. Location: Helvellyn summit at 12:00 UTC. Full report: Sodden ground and swollen streams were the norm today. There is no snow and ice conditions across the Lake District with Wednesday's freezing level above the summits. Care was needed to cross streams as stepping-boulders had shifted and loosened. Despite the absence of freezing conditions, snow or ice, the wind chill maintains a very cold feel. With fluctuating temperatures from the beginning of December the wind chill has remained in negative figures throughout the period requiring full winter clothing; a waterproof coat with hood, waterproof overtrousers, warm layers, a hat and gloves at least. Some sun may appear on the fells tomorrow but will still be accompanied by a biting wind and driven snow flurries. Be prepared for winter conditions to return. Temperature: plus 3.6 C, Maximum wind speed 36.9 mph, Wind chill: minus 2.7 C, Average wind speed: 25.9 mph
